

Homework 3

- Story Maps provide a great opportunity for you to present an interesting topic in a dynamic, interactive, web-based approach. Rather than relying only on just text or static maps, you now possess the necessary skills for creating web-based Story Maps using ArcGIS Online.
- **You can choose any topic you want**, but it must be geographic and it must be something that can be told with a mixture of data, photos, text, and possibly videos.
- Objective of this homework, is to create a spatial narrative describing the geographic nature of a story, create a series of maps to aid in the explanation of the narrative, use media to accommodate your maps and create a story map that brings all these elements together.
